What is JTCC

JTCC is Textile Professional Engineers' Center, consisted of Professional Engineers authorized by the Ministry of Education, Culture, Sports, Science, and Technology in Japan

Membership should be guaranteed through professional engineers' screening test based upon "Professional engineers' law".

Nowadays, Japanese textile industry faces global scaled international competition, therefore the drastic policy transformations are indispensable demand.

JTCC is always supporting renovation activities on small & medium sized textile in Japan, as we have done corporation works through wide ranged "Know How" of Textile Technology.

JTCC's members always actively applies our know how in order to contribute the development of textile and garment industries.

JTCC could be provided all kinds of textile technology and skill service.

JTCC accepts various kinds of consulting requirement and technological supports, including ISO 9001s, and 14001s, certification obtaining

Examples of Technical Supporting Activities

(1) Quality Improvement

Improvement of production efficiency and its A-grade obtaining rate in weaving process, and right color in dyeing process.. Support once a week within every month.

(2) Production Management

Supporting production management of spinning factory, including relative overseas factories. Support about one week time for every month

(3) Make plans for new factory design

Overseas technical supporting merchandizing & development of new products. Propose new machines and layout by engineers team consisted of yarn making, fabric making, dyeing divisions. Contract for technical support would be signed and paid monthly fee bases.

(4) Planning of save energy of weaving and dyeing factory

After observation and checking a factory, propose saving energy planning. Mainly China, factories equipped with continuous process, dyeing and finishing facilities, and utility

components.

photograph about measurement of heat loss in dryer 2011-2012
